

Acronis

Advanced Disaster Recovery

For Acronis Cyber Protect Cloud

Get back to business in minutes when disaster strikes by spinning up your systems in the Acronis Cloud and restoring them anywhere, ensuring immediate data availability. Make disaster recovery painless and increase efficiency with orchestration runbooks and automatic failover.

When you add Advanced Disaster Recovery to Acronis Cyber Protect Cloud, you can easily extend the cloud recovery services your company needs.

ENHANCED PROTECTION FOR ACRONIS CYBER PROTECT CLOUD

Acronis Cyber Protect Cloud is the only solution that unites cybersecurity, data protection and management to protect endpoints, systems and data. Its integration and automation powered by machine intelligence eliminates complexity so you can have better protection while keeping your costs down.

Enhance your disaster recovery with essential cyber protection with zero effort.

REDUCE DOWNTIME

Get back up and running in mere minutes by spinning up IT systems in the Acronis Cloud with full site-to-site connectivity and the ability to recover them to similar or dissimilar hardware.

MINIMIZE COMPLEXITY

No need to add, learn or manage another platform. It's one solution for data, systems and applications managed from a single interface that enables you to build complete cyber protection.

ENSURE MALWARE-FREE RECOVERIES

Prevent reinfection by failing over to a malware-free recovery point (available with Advanced Security).

ACRONIS CYBER PROTECT CLOUD INCLUDES:	ADVANCED DISASTER RECOVERY ADDS:
<ul style="list-style-type: none"> File, image and applications backup Local recovery with Instant Restore Test failover Cloud-only VPN connection 	<ul style="list-style-type: none"> Production and test failover to the Acronis Cloud Automated fast failback for physical and virtual machines Automated test failover VPN-less deployment option IPsec Multisite VPN support, L2 site-to-site open VPN. Multiple runbook templates Custom DNS configuration Disaster recovery for DHCP servers

DELIVER DISASTER RECOVERY WITH EASE

Disaster recovery and automated failback for physical and virtual workloads

Minimize downtime by enabling easy, scalable and efficient cloud-based recovery and failback of all popular workloads, including Windows and Linux physical servers and VMs, major hypervisors and Microsoft apps.

Disaster recovery orchestration

Simplify disaster recovery and increase operational efficiency by automating failovers and orchestrating disaster recovery procedures using runbooks — a set of instructions defining how to spin up your clients' production environment in the cloud.

Production failover

Ensure quick and easy automated failover of your production environment to an off-site server running in Acronis Disaster Recovery storage or to a hot storage location in the Acronis Cloud.

Disaster recovery for DHCP servers

Gain more control over network configurations and IP address leases by running your own DHCP service on a recovery server during failover or test failover. You can also run applications where the license is bound to a MAC address.

Site-to-site VPN connection

Enable a secure VPN connection between the local site and the cloud site to facilitate partial failover of tightly dependent servers on the local site. When one of the servers is recreated on the cloud site, the servers continue to communicate, ensuring minimal downtime.

Near-instant RPOs and RTOs

Achieve both RPOs and RTOs of less than 15 minutes. The Acronis RunVM engine enables best-in-class production and test failover speed, while flexible backup frequency policies lead to tighter RPOs.

Execution monitoring

Gain visibility into disaster recovery orchestration with a detailed runbook-execution real-time view and execution history.

Point-in-time recovery

Prevent data loss and avoid data corruption with granularity of control over data protection and recovery capabilities. Restore

systems and data to any recoverable point in the past, instead of to the latest one.

IPsec multisite VPN support

Strengthen security with IPsec multisite VPN support that integrates secure protocols and algorithms, so you can easily support multiple sites that are hosting critical data, systems and applications with higher requirements for security, compliance and bandwidth.

Custom DNS configuration

Create custom DNS configurations for disaster recovery cloud services in the Acronis Cloud. You can then adjust DNS settings simply.

Failover to a malware-free recovery point

Eliminate the possibility of reinfection by checking the list of recovery points available for failovers to see if a malware or other indicator of compromise is discovered during the backup scanning process.*

Automated test failover

Save time and effort with a simplified, automated test failover. With the Advanced Disaster Recovery pack, you can perform scheduled test failover for any server on a monthly or weekly basis, giving you the confidence that you can recover quickly and successfully.

*Advanced Security must be enabled

PART OF ACRONIS CYBER PROTECT CLOUD

Advanced Disaster Recovery is an add-on package that adds powerful disaster recovery capabilities to Acronis Cyber Protect Cloud: industry-first integration that allows service providers to deliver cybersecurity, data protection, file sync and share, and security management services through one integrated solution.
